

# DUROCELL

Laboratory Ovens with Natural Air Convection

MMM Group

The special line DUROCELL with highly resistant layer of INTERPON, protecting the inner stainless steel from aggressive substances like acids and lyes. It allows optimal tempering of materials. Ideal for acid and alkali hydrolysis, extraction with non-flammables and decomposition of substances in solid phase.

**Internal volume:** 22, 55, 111, 222 litres  
**Temperature range:** from 5°C above the ambient temperature up to 125°C  
**Internal chamber:** stainless steel DIN 1.4301 (AISI 304) covered with chemically-resistant layer  
Clean premises version (on request)

## Eco line

- Intuitive control
- Microprocessor process control Fuzzy logic
- Multi-lingual communication
- Acoustic and visual alarm
- LED indicator of device functionality
- 3-inch (7.6 cm) LCD display
- Transflective brilliant FSTN display, uses COG technology (it is backlit and uses the reflection of external light – higher intensity of external light increases the readability of the display)
- Adjustable display contrast depending on the location of the device
- Extra wide viewing angle
- Large, remotely visible characters on the display
- Current information (e.g. temperature, relative humidity on the CLIMACELL® instrument, pressure on the VACUCELL® instrument) is increased during the program run for better readability
- Durable, foil keyboard using a pleasant SoftTouch surface
- Mechanical button response
- Backlit symbols integrated directly into the foil keyboard
- Keypad lock to protect against unauthorized access – by adjustable multi-press
- Real time programming and cycling (ramps as optional equipment)
- 9 programs, 2 segments in each program, up to 99 cycles
- RS232 and USB Device interface
- Ethernet (RJ 45) and USB Host (optional)

## Note:

All the technical data refer to 22°C ambient temperature and 230 V supply voltage.

The stated deviations of temperature are valid for the device in standard version without options, measured according to DIN 12880 in a steady state with an empty chamber.

The other parameters may also vary depending on the optional options added and the media used.

\*) The trays may be covered to approximately 50% of their surface and if possibly in such a way so as the air may evenly flow inside the chamber space.

\*\*\*) Mains voltage is specified on type label of the device.

Changes in the design and make reserved.
